Farmingdale, N.Y. — Designed in cooperation with renowned inventor Ned Steinberger, the new NS Mini Headstock Tuner allows musicians to take advantage of an exceptionally low-profile design, highly-sensitive piezo pickup and super-bright back-lit display.

It's no longer necessary that your audience need view the tuner attached to your mandolin, guitar, electric bass, banjo or other stringed instrument, or to even know you're using an electronic tuner.

The miniscule design allows the tuner to hide effortlessly behind the headstock, concealing it from your audience and allowing it to remain mounted on the guitar inside most cases.

Featuring a 360 degree swivel mechanism and adjustable padded clamp, the NS Mini offers optimal viewing angles and maximum positioning flexibility. As a result, the NS Mini is equally at home on left and right-handed instruments as well as on small and large headstocks, making it the ideal choice for the widest variety of players and instruments.

Specifications:

- Compact, low profile design
- Concealed from your audience
- Chromatic tuning automatically senses the note
- Easy-to-read, multi-color display works
- Works in well-lit or dark environments
